Abstract:

An e-CO-OL air conditioner is a simple electronic device which is very portable and energy efficient. Many air conditioners have been built but they are neither eco-friendly nor energy efficient. So we developed an efficient model, obtaining existing concept and modified for the Indian use. To make it most affordable we used naturally and easily available material. Using these kinds of alternatives is better than destructing the living eco-system. These air conditioners can have an added advantage to connect with Solar Power system of your home as it consumes very less electricity. If you are trying to beat the summer heat, but if you want it at an affordable & effective way, then our air coolers will be the best option.
