Abstract:

Now-a-days construction of house for the poor people is very difficult & costly. This project doesn't require any foundation due to the light weight of structure over the soil. It is an eco friendly project. By using this concept we can construct house, water tanks, boats etc in our desirable designs coz it is easily mould ability to any shape.The main aim of this project is to construct the house at low cost. By using the concept of ferrous cement concept we reduce the cost of construction by 20% of conventional method of construction. Ferro cement is not a type of cement. It is the combination cement mortar mix and mesh.
