Abstract

Fire alarms are prime necessities in modern buildings and architectures. To build a fire alarm that detects smoke or heat and raise an alarm which warns people.The purpose of the project is to provide an early warning system for safety. Fire alarms can be used in any place like parks, theatres, hotels, restaurants, boats, ships, Fire alarms can be also used as temperature sensors in some applications, when the temperature goes up abruptly it can inform. Fire alarm can be used in our home for safety purpose and it is a very good precautionary measure.
