### **Abstract:**

The main objective of the project is that farmers had problems about cultivating the weeds and also the power losses will also be more in villages and it reduces the crop for farmers and that is why I started my project to reduce the cost and to provide power by our machine to the farmers. Our project resolves the problems of the farmers and to increase the profit by low investment with our weed cultivator and pump and such that the farmers will be in a position to reduce their labour investment.
