Address : REDDY COLONY,6-228

Abstract:

In our daily life, we see many people using shoes for different purposes like jogging, running, stress relieving etc. There are different kinds of shoes used by different people like athletes, common people, old people for running and walking. We have proposed a shoe which monitors the distance travelled, speed and time period of the person walking. This proposed model specifically helpful for the patients who are under doctor's advice. The ON/OFF button enables the device to turn on and starts reading the distance travelled and speed of the person walking or jogging using the display on it. It would be a great help for the sports persons to monitor themselves and work out accordingly to be successful in their carrier.
