### Abstract:

This study aspires to have an unconventional and alternative source of the fire wood. This was conducted in order to produce a log out by using Cow dung mixed with Saw dust, Paddy husk. This project is eco-friendly and can make log from waste. We can use this instead of the firewood and also it will cause less pollution compared to firewood. Resulting in the Lessing of deforestation and instead those trees can be use as food for the cattle. These logs can also be improved by varying the amount of Cow dung and Saw dust, Paddy Husk, So, that the Logs can be Flammable. The making process can also be improved. The future researches can use different kinds of techniques in making the logs more efficient.
